| | | |
|---|---|---|
| **Postman** | **Digital Ocean** | **MaterializeCSS** |
| **Netlify** | **Heroku** | **Bootstrap** |

## Experience

Full Stack Software Developer, Freelance, Los Angeles, CA - March 2020 - present

### Recent Projects

TideMaster - single page application

A full stack, SPA that provides surf condition (weather) reports for individual surf spots around the world. I built the server and API using NodeJS, Express and MongoDB/Mongoose and Postman for testing. Authentication was created using bcyptjs and JSONWebToken. The front end was built with React, Redux, MaterializeCSS and React Router.

Surfboard Components - single page application

Surfboard components is a front end project built with React and the ContextAPI. The application allows a user to select a surfboard type, changing the state and rendering new components to the UI.

Motion Picture Industry Grip, I.A.T.S.E. Local 80, Los Angeles, CA - 2016-2020

Worked on tv, film and commercial sets assisting in lighting and camera support

Director of Acquisitions, Vision Property Management, Columbia, SC - 2012-2016

Lead a five member team to analyze property data, built and tracked data reports for investors
